Baylor Scott & White Health Mission Statement

Our Mission

Founded as a Christian ministry of healing, Baylor Scott & White Health promotes the well-being of all individuals, families and communities.

Our Ambition

To be the trusted leader, educator and innovator in value-based care delivery, customer experience and affordability.

Our Values

- We serve faithfully
- We act honestly
- We never settle
- We are in it together

Our Strategies

- Health – Transform into an integrated network that ambitiously and consistently provides exceptional quality care
- Experience – Achieve the market-leading brand by empowering our people to design and deliver a customer-for-life experience
- Affordability – Continuously improve our cost discipline to invest in our Mission and reduce the financial burden on our customers
- Alignment – Ensure consistent results through a streamlined leadership approach and unified operating model
- Growth – Pursue sustainable growth initiatives that support our Mission, Ambition, and Strategy

WHO WE ARE

As the largest not-for-profit healthcare system in Texas and one of the largest in the United States, Baylor Scott & White Health was born from the 2013 combination of Baylor Health Care System and Scott & White Healthcare. Today, Baylor Scott & White includes 50 hospitals, more than 900 patient care sites, more than 7,500 active physicians, and over 47,000 employees and the Scott & White Health Plan.

Executive Summary

As the largest not-for-profit health care system in Texas, Baylor Scott & White Health (BSWH) understands the importance of serving the health needs of its communities. In order to do that successfully, we must first take a comprehensive look at the systemic and local issues our patients, their families and neighbors face when it comes to having the best possible health outcomes and well-being.

Beginning in June of 2018, a BSWH task force led by the Community Health, Tax Services, and Marketing Research departments began the process of assessing the current health needs of the communities served for all BSWH hospital facilities. IBM Watson Health (formerly Truven Health Analytics) collected and analyzed the data for this process and compiled a final report made publicly available in June of 2019.

BSWH owns and operates multiple individual licensed hospital facilities serving the residents of north and central Texas. Two hospitals with overlapping communities have collaborated to conduct this joint community health needs assessment that applies to the following BSWH hospital facilities:

- Baylor Scott & White Medical Center - Lake Pointe
- Baylor Scott & White Emergency Hospital - Rockwall

For the 2019 assessment, the community includes the geographic area where at least 75% of the hospital facilities' admitted patients live. These hospital facilities collaborated to conduct a joint CHNA report in accordance with Treasury Regulations and 501(r) of the Internal Revenue Code. All of the collaborating hospital facilities included in this joint CHNA report define their community, for purposes of the CHNA report, to be the same.

The hospital facilities and IBM Watson Health (Watson Health) examined over 102 public health indicators and conducted a benchmark analysis of the data comparing the community to overall state of Texas and United States (U.S.) values. A qualitative analysis included direct input from the community through focus groups and key informant interviews. Interviews included input from state, local, or regional governmental public health departments (or equivalent department or agency) with knowledge, information, or expertise relevant to the health needs of the community, and individuals or organizations serving or representing the interests of medically underserved, low-income, and minority populations in the community.

Needs were first identified when an indicator for the community served was worse than the Texas state benchmark. A need differential analysis conducted on all the low performing indicators determined relative severity by using the percent difference from benchmark. The outcome of this quantitative analysis aligned with the qualitative findings of the community input sessions to create a list of health needs in the community. Each health need received assignment into one of four quadrants in a health needs matrix, this clarified the assignment of severity rankings of the needs. The matrix shows the convergence of needs identified in the qualitative data (interview and focus group feedback) and quantitative data (health indicators) and identifies the top health needs for this community.

Hospital leadership and/or other invited community leaders reviewed the top health needs in a meeting to select and prioritize the list of significant needs in this health community. The meeting, moderated by Watson Health, included an overview of the CHNA process for BSWH, the methodology for determining the top health needs, the BSWH prioritization approach, and discussion of the top health needs identified for the community.

Participants identified the significant health needs through review of data driven criteria for the top health needs, discussion, and a multi-voting process. Once the significant health needs were established, participants rated the needs using prioritization criteria recommended by the focus groups. The sum of the criteria scores for each need created an overall score became the basis of the prioritized order of significant health needs. The resulting prioritized health needs for this community include:

Priority	Need	Category of Need
1	Ratio of Population to One Dentist	Access to Care
2	Ratio of Population to One Primary Care Physician	Access to Care
3	Ratio of Population to One Non-Physician Primary Care Provider	Access to Care
4	Percentage of Population Under Age 65 Without Health Insurance	Access to Care
5	No Vehicle Available	Access to Care
6	Severe Housing Problems	Environment - Housing

The assessment process identified and included community resources able to address significant needs in the community. These resources, located in the appendix of this report, will be included in the formal implementation strategy to address needs identified in this assessment. The approved report is publicly available by the 15th day of the 5th month following the end of the tax year.

An evaluation of the impact and effectiveness of interventions and activities outlined in the implementation strategy drafted after the prior assessment is also included in **Appendix F** of this document.

The prioritized list of significant health needs approved by the hospitals' governing body and the full assessment is available to anyone at no cost. To download a copy, visit **[BSWHealth.com/CommunityNeeds](https://www.bswhealth.com/CommunityNeeds)**.

This assessment and corresponding implementation strategy meet the requirements for community benefit planning and reporting as set forth in state and federal laws, including but not limited to: Texas Health and Safety Code Chapter 311 and Internal Revenue Code Section 501(r).

Community Health Needs Assessment Requirement

As a result of the Patient Protection and Affordable Care Act (PPACA), all tax-exempt organizations operating hospital facilities are required to assess the health needs of their community through a Community Health Needs Assessment (CHNA) once every three years.

The written CHNA Report must include descriptions of the following:

- The community served and how the community was determined
- The process and methods used to conduct the assessment including sources and dates of the data and other information as well as the analytical methods applied to identify significant community health needs
- How the organization took into account input from persons representing the broad interests of the community served by the hospital, including a description of when and how the hospital consulted with these persons or the organizations they represent
- The prioritized significant health needs identified through the CHNA as well as a description of the process and criteria used in prioritizing the identified significant needs
- The existing healthcare facilities, organizations, and other resources within the community available to meet the significant community health needs
- An evaluation of the impact of any actions that were taken, since the hospital facility(s) most recent CHNA, to address the significant health needs identified in that last CHNA

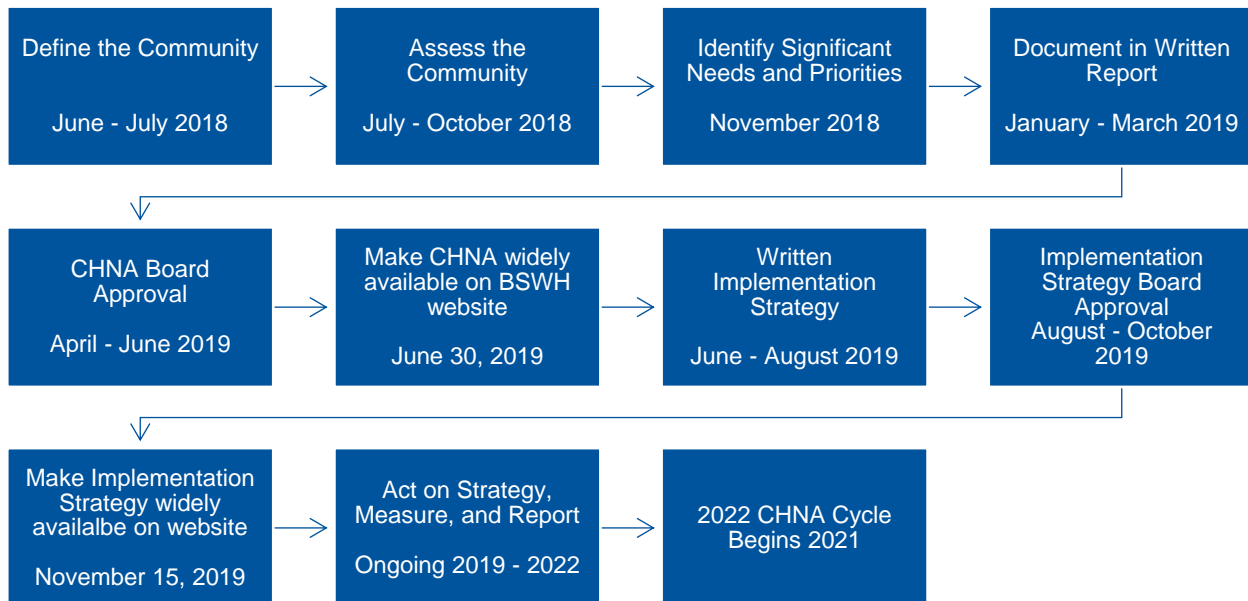

PPACA requires hospitals to adopt an Implementation Strategy to address prioritized community health needs identified through the assessment. An Implementation Strategy is a written plan addressing each of the significant community health needs identified through the CHNA in a separate but related document to the CHNA report.

The written Implementation Strategy must include the following:

- List of the prioritized needs the hospital plans to address and the rationale for not addressing other significant health needs identified
- Actions the hospital intends to take to address the chosen health needs
- The anticipated impact of these actions and the plan to evaluate such impact (e.g. identify data sources that will be used to track the plan's impact)
- Identify programs and resources the hospital plans to commit to address the health needs
- Describe any planned collaboration between the hospital and other facilities or organizations in addressing the health needs

CHNA Overview, Methodology and Approach

BSHW began the 2019 CHNA process in June of 2018; the following is an overview of the timeline and major milestones.

BSWH partnered with Watson Health to complete a CHNA for qualifying BSWH hospital facilities.

Consultant Qualifications & Collaboration

Watson Health delivers analytic tools, benchmarks, and strategic consulting services to the healthcare industry, combining rich data analytics in demographics, including the Community Needs Index, planning, and disease prevalence estimates, with experienced strategic consultants delivering comprehensive and actionable Community Health Needs Assessments.

Collaboration

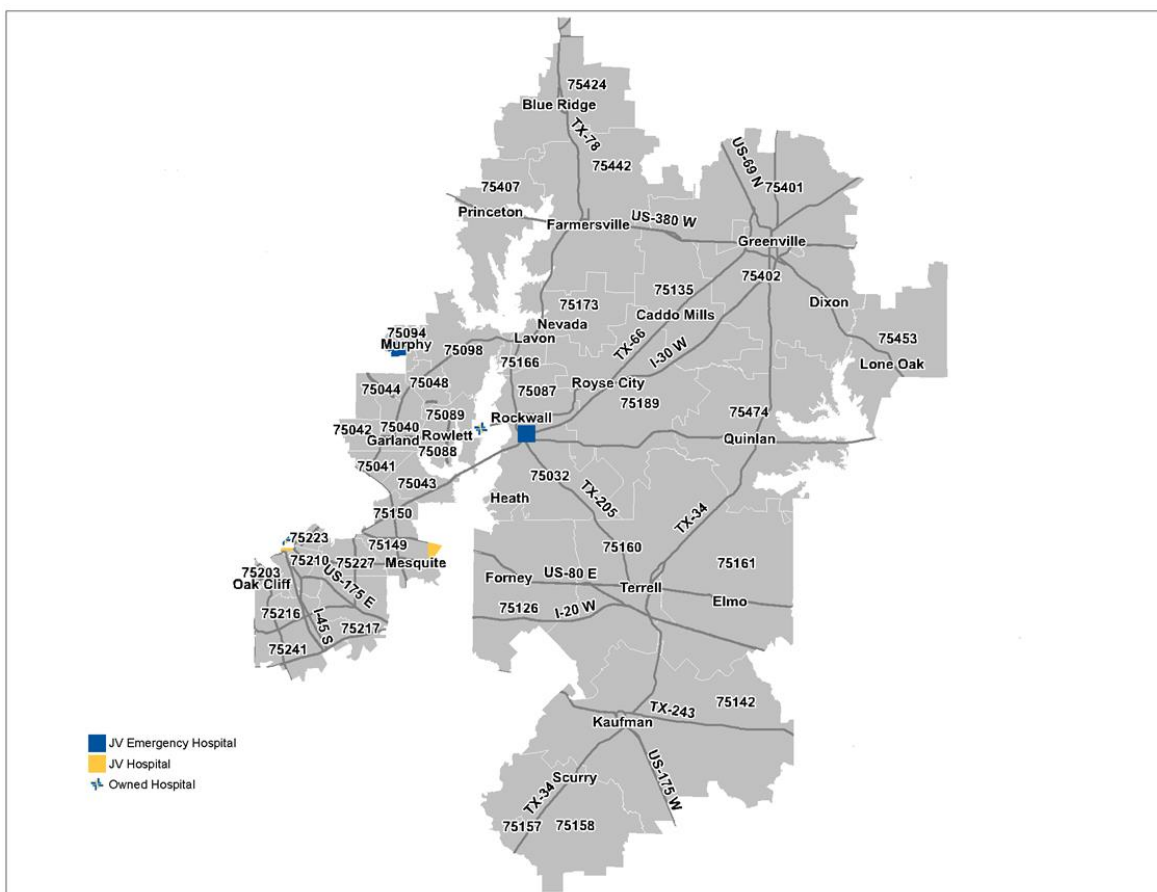

BSWH owns and operates multiple individually licensed hospital facilities serving the residents of North and Central Texas. Two hospital facilities with overlapping communities have collaborated to conduct this joint community health needs assessment. This joint community health needs assessment applies to the following BSWH hospital facilities:

- Baylor Scott & White Medical Center - Lake Pointe
- Baylor Scott & White Emergency Hospital - Rockwall

Community Served Definition

The community served by the collaborating BSWH hospital facilities includes the ZIP codes listed below and spans multiple counties in the Lake Pointe and Rockwall areas of north Texas including Collin, Dallas, Hunt, Kaufman, and Rockwall counties. The community includes the geographic area where at least 75% of the hospital facilities' admitted patients live.

Assessment of Health Needs

To identify the health needs of the community, the hospital facilities established a comprehensive method accounting for all available relevant data including community input. The basis of identification of community health needs was the weight of qualitative and quantitative data obtained when assessing the community. Surveyors conducted interviews and focus groups with individuals representing public health, community leaders/groups, public organizations, and other providers. Data collected from several public sources compared to the state benchmark indicated the level of severity.

Quantitative Assessment of Health Needs – Methodology and Data Sources

Quantitative data collection and analysis in the form of public health indicators assessed community health needs, including collection of 102 data elements grouped into 11 categories, and evaluated for the counties where data was available. Since 2016, the identification of several new indicators included: addressing mental health, health care costs, opioids, and social determinants of health. The categories and indicators are included in the table below, the sources are in **Appendix A**.

This community was defined by ZIP codes, however public health indicators are most commonly available by county. Therefore, a patient origin study determined which counties principally represent the community's residents receiving hospital services. The principal counties for the Lake Pointe /Rockwall Health Community needs analysis are Dallas, Kaufman, and Rockwall counties.

A benchmark analysis conducted for each indicator collected for the community served, determined which public health indicators demonstrated a community health need from a quantitative perspective. Benchmark health indicators included (when available): overall U.S. values; state of Texas values; and goal setting benchmarks such as Healthy People 2020.

According to America's Health Rankings 2018 Annual Report, Texas ranks 37th out of the 50 states. The health status of Texas compared to other states in the nation identified many opportunities to impact health within local communities, including opportunities for those communities that ranked highly. Therefore, the benchmark for the community served was set to the state value.

When the community benchmark was set to the state value, it determined which indicators for the community did not meet the state benchmarks. This created a subset of indicators for further analysis. A need differential analysis clarified the relative severity of need for these indicators. The need differential standardized the method for evaluating the degree each indicator differed from its benchmark; this measure is called the need differential. Health community indicators with need differentials above the 50th percentile, ordered by severity, and the highest ranked indicators were the highest health needs from a quantitative perspective. These data are available to the community via an interactive Tableau dashboard at BSWHealth.com/CommunityNeeds.

The outcomes of the quantitative data analysis were compared to the qualitative data findings.

Health Indicator Benchmark Analysis Example

Qualitative Assessment of Health Needs and Community Input – Approach

In addition to analyzing quantitative data, two (2) focus groups with a total of 23 participants, and three (3) key informant interviews, gathered the input of persons representing the broad interests of the community served. The focus groups and interviews solicited feedback from leaders and representatives who serve the community and have insight into community needs. Prioritization sessions held with hospital clinical leadership and other community leaders identified significant health needs from the assessment and prioritized them.

The focus group familiarized participants with the CHNA process and solicited input to understand health needs from the community's perspective. Focus groups, formatted for individual as well as small group feedback, helped identify barriers and social determinants influencing the community's health needs. Barriers and social determinants were new topics added to the 2019 community input sessions.

Watson Health conducted key informant interviews for the community served by the hospital facility. The interviews aided in gaining understanding and insight into participants concerns about the general health status of the community and various drivers contributing to health issues.

Participation in the qualitative assessment included at least one state, local, or regional governmental public health department (or equivalent department or agency) with knowledge, information, or expertise relevant to the health needs of the community, as well as individuals or organizations serving or representing the interests of medically underserved, low-income and minority populations in the community.

Participation from community leaders/groups, public health organizations, other healthcare organizations, and other healthcare providers (including physicians) ensured that the input received represented the broad interests of the community served.

Note: multiple persons from the same organization may have participated

In addition to soliciting input from public health and various interests of the community, the hospital facilities were also required to consider written input received on their most recently conducted CHNA and subsequent implementation strategies. The assessment is available to receive public comment or feedback on the report findings on the BSWH website ([BSWHealth.com/CommunityNeeds](https://www.bswhealth.com/CommunityNeeds)) or by emailing CommunityHealth@BSWHealth.org. To date BSWH has not received such written input but continues to welcome feedback from the community.

Community input from interviews and focus groups organized the themes around community needs, and compared them to the quantitative data findings.

Methodology for Defining Community Need

Using qualitative feedback from the interviews and focus group, and the health indicator data, the consolidated issues currently affecting the community served assembled in the Health Needs Matrix below helps identify the health needs for each community. The upper right quadrant of the matrix is where the needs identified in the qualitative data (interview and focus group feedback) and quantitative data (health indicators) converge to identify the top health needs for this community.

The Health Needs Matrix

Source: IBM Watson Health, 2018

Information Gaps

In some areas of Texas, health indicators were not available due to the impact small population size has on reporting and statistical significance. Most public health indicators were available only at the county level. Evaluating data for entire counties versus more localized data, made it difficult to understand the health needs for specific population pockets within a county. It could also be a challenge to tailor programs to address

community health needs, as placement and access to specific programs in one part of the county may or may not affect the population who truly need the service.

Approach to Identify and Prioritize Significant Health Needs

In a session held on November 6, 2018, Baylor Scott & White hospital facility leadership met with community leaders, and identified and prioritized significant health needs.

The meeting, moderated by Watson Health, included an overview of the CHNA process for BSWH, the methodology for determining the top health needs, the BSWH prioritization approach, and discussion of the top health needs identified for the community.

Prioritization of the health needs took place in two steps. In the first step, participants reviewed the top health needs for their community with associated data-driven criteria to evaluate. The criteria included health indicator value(s) for the community, how the indicator compared to the state benchmark, and potentially preventable ED visit rates for the community (if available). Participants then leveraged the professional experience and community knowledge of the group via discussion about which needs were most significant. With the data-driven review criteria and the discussion completed, a multi-voting method identified the significant health needs. Participants voted individually for the five (5) needs they considered as the most significant for this community. With votes tallied, six (6) identified needs ranked as significant health needs, based on the number of votes.

In the second step, participants ranked the significant health needs based on prioritization criteria recommended by the focus group conducted for this community:

1. Root Cause: the need is a root cause of other problems, thereby addressing it could possibly impact multiple issues
2. Community Strength: extent that initiatives to address the issue can build on existing community strengths and resources
3. Severity: the problem results in disability or premature death or creates burdens on the community, economically or socially
4. Vulnerable Populations: there is a high need among vulnerable populations and/or vulnerable populations are adversely impacted

Through discussion and consensus, the group rated each of the five (5) significant health needs on each of the four (4) identified criteria utilizing a scale of one (low) to 10 (high). The criteria scores summed for each need created an overall score and became the basis for prioritizing the significant health needs. For the scores resulting in a tie, the need with the greater negative difference from the benchmark ranked above the other need. The outcome of this process (the list of prioritized health needs for this community) is located in the “**Prioritized Significant Health Needs**” section of the assessment.

The prioritized list of significant health needs proved by the hospitals’ governing body and the full assessment is available to anyone at no cost. To download a copy, visit **BSWHealth.com/CommunityNeeds**.

Existing Resources to Address Health Needs

Part of the assessment process included gathering input on community resources available to address the significant health needs identified through the CHNA. BSWH Community Resource Guides, and input from qualitative assessment participants, identified community resources that may assist in addressing the health needs identified for this community. A description of these resources is in **Appendix B**. An interactive asset map of various resources identified for all BSWH communities is located at **[BSWHealth.com/CommunityNeeds](https://www.bswhealth.com/CommunityNeeds)**.

Lake Pointe/Rockwall Health Community CHNA

Demographic and Socioeconomic Summary

According to population statistics, the community served projects a faster growth rate than Texas and the United States. The median age was younger, and the median income was higher than Texas overall and the country. The community served had more Medicaid beneficiaries than Texas and more uninsured individuals than Texas and the U.S.

Demographic and Socioeconomic Comparison: Community Served and State/U.S. Benchmarks

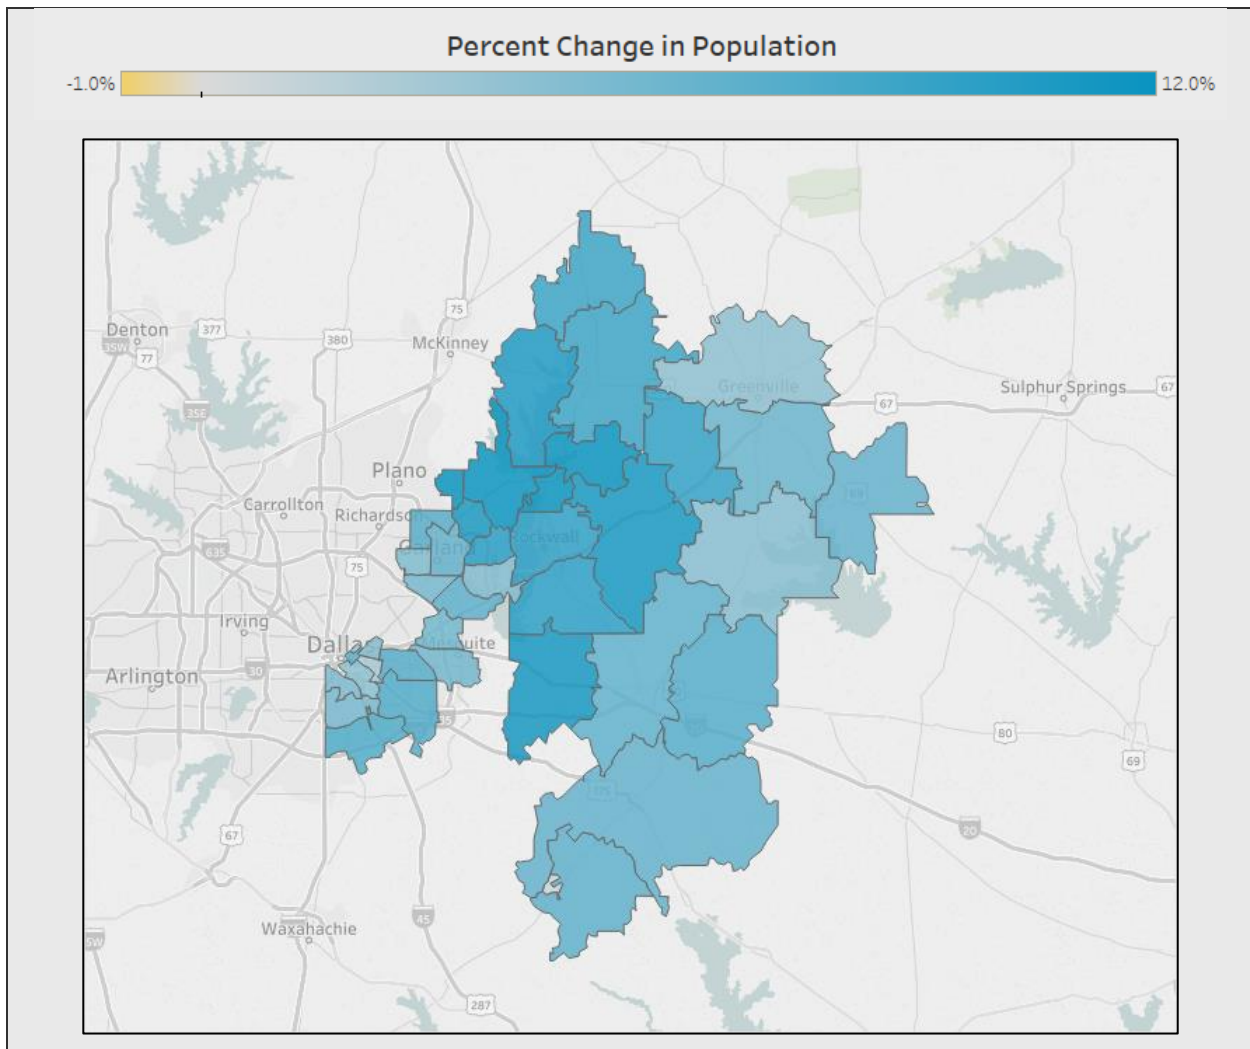

Geography	Benchmarks		Community Served	
	United States	Texas	Lake Pointe/ Rockwall Health Community	
Total Current Population	326,533,070	28,531,631	1,152,969	
5 Yr Projected Population Change	3.5%	7.1%	7.5%	
Median Age	42.0	38.9	36.8	
Population 0-17	22.6%	25.9%	27.4%	
Population 65+	15.9%	12.6%	11.5%	
Women Age 15-44	19.6%	20.6%	20.7%	
Non-White Population	30.0%	32.2%	44.3%	
Hispanic Population	18.2%	39.4%	33.9%	
Insurance Coverage	Uninsured	9.4%	19.0%	19.4%
	Medicaid	14.9%	13.4%	14.7%
	Private Market	9.6%	9.9%	9.3%
	Medicare	16.1%	12.5%	12.0%
	Employer	45.9%	45.3%	44.7%
Median HH Income	\$61,372	\$60,397	\$61,901	
Limited English	26.2%	39.9%	39.6%	
No High School Diploma	7.4%	8.7%	11.1%	
Unemployed	6.8%	5.9%	6.6%	

Source: IBM Watson Health / Claritas, 2018; US Census Bureau 2017 (U.S. Median Income)

The community served expects to grow 7.5% by 2023, an increase of more than 86,000 people. The 7.5% projected population growth is slightly higher than the state's 5-year projected growth rate (7.1%) and higher compared to the national projected growth rate (3.5%). The ZIP codes projected to experience the most growth in five years are:

- 75098 Sachse-Wylie-Murphy – 7,536 people
- 75217 Southeast Dallas – 6,525 people
- 75126 Forney – 5,200 people

2018 - 2023 Total Population Projected Change by ZIP Code

Source: IBM Watson Health / Claritas, 2018

The community's population is 36.3% ages 18-44, with 27.4% under age 18. The largest cohort (ages 18-44) projects to grow by 21,640 people by 2023 (5.2%). The age 65 plus cohort was the smallest (11.5% of the 2018 population), but projects the fastest growth (26.1%) over the next five years adding 34,443 seniors to the community. Growth in the senior population will likely contribute to increased utilization of services as the population continues to age.

Population Distribution by Age

Source: IBM Watson Health / Claritas, 2018

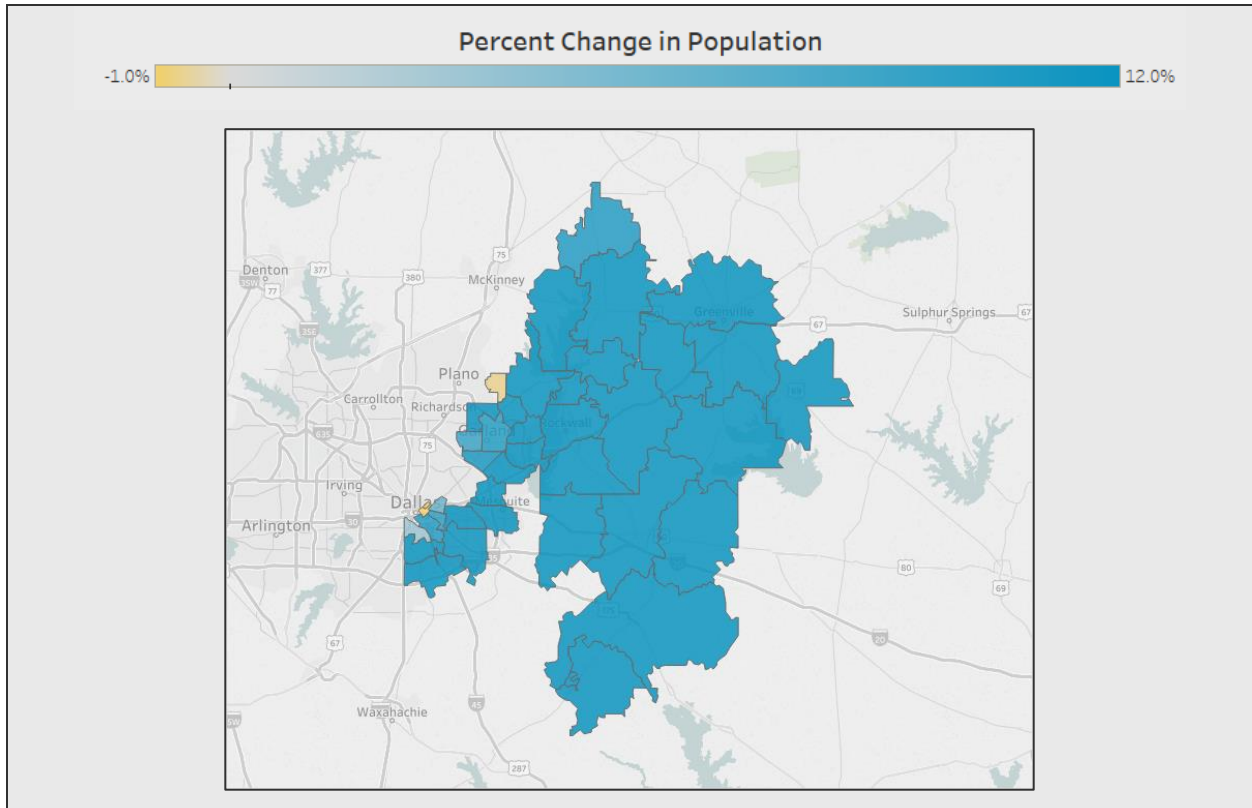

Population statistics are analyzed by race and by Hispanic ethnicity. The community was primarily White and non-Hispanic, but diversity in the community will increase due to the projected growth of minority populations over the next five years. The White non-Hispanic population is projected to decline in the next 5 years (-0.4%) while the expected growth rate of the Hispanic population (all races) is over 50,000 people (12.9%) by 2023. The non-Hispanic population is expected to have slower growth (4.7%), adding about 36,000 people to the community. The Asian population (all ethnicity) is expected to experience the highest percentage growth (25.8%) adding 17,193 people in the next 5 years. The Black population (all ethnicities) also makes up a significant portion of the population (20.5%) and is expected to grow by 7.2%, increasing by 17,062 people in the same timeframe.

Population Distribution by Race and Ethnicity

Source: IBM Watson Health / Claritas, 2018

2018 - 2023 Hispanic Population Projected Change by ZIP Code

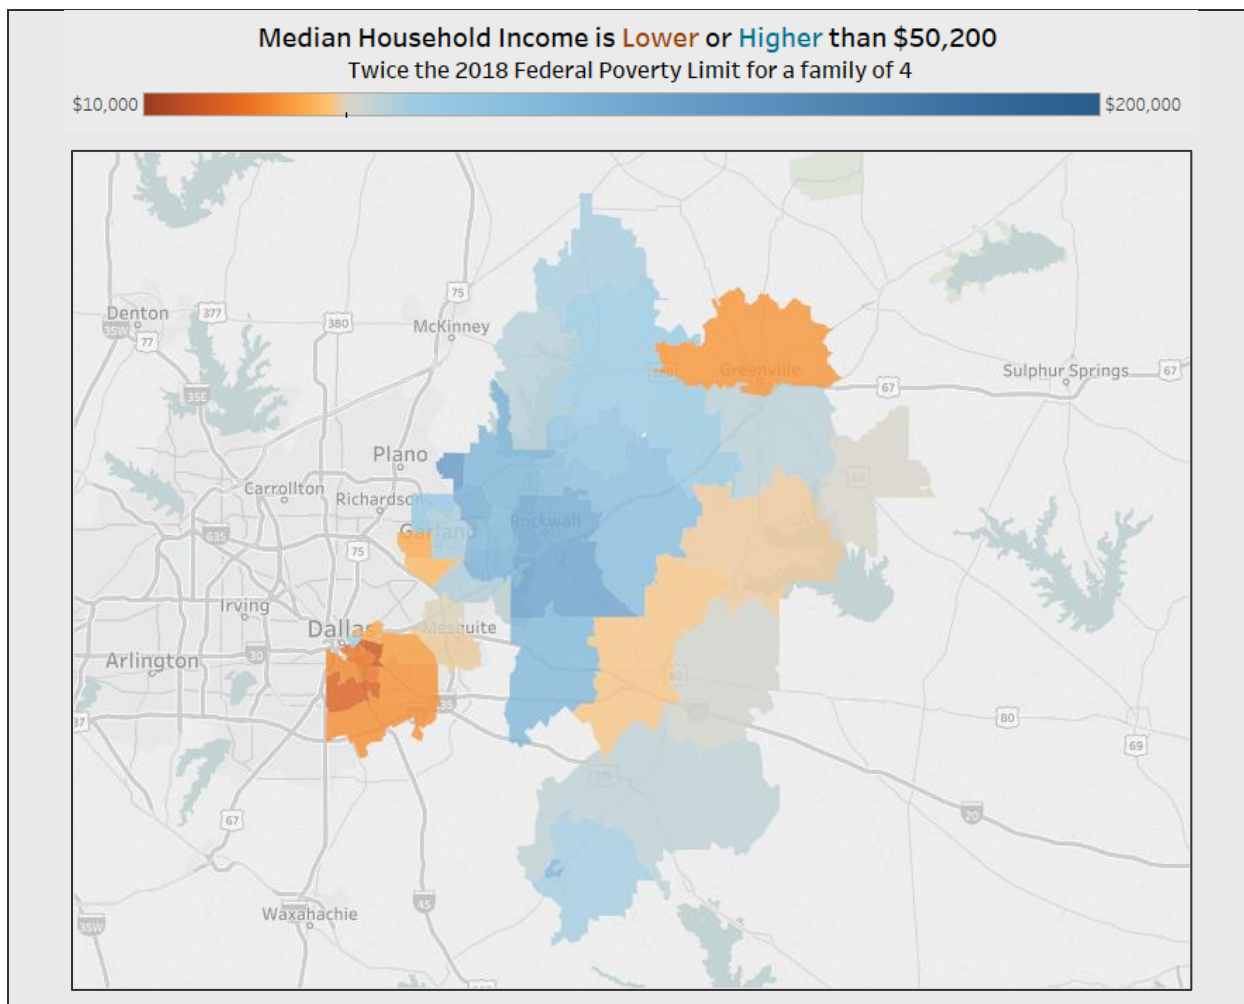

Source: IBM Watson Health / Claritas, 2018

The 2018 median household income for the United States was \$61,372 and \$60,397 for the state of Texas. The median household income for the ZIP codes within this community ranged from \$21,940 for 75210 – Southeast Dallas to \$120,638 for 75094 – Sachse-Wylie-Murphy. There were sixteen ZIP codes with median household incomes less than \$50,200, twice the 2018 Federal Poverty Limit for a family of four:

- 75150 North Mesquite - \$49,678
- 75149 West Mesquite - \$48,436
- 75474 Quinlan-Caddo Mills - \$48,370
- 75160 Terrell - \$47,506
- 75041 Garland - \$44,881
- 75246 Southeast Dallas - \$43,992
- 75042 Garland - \$42,226
- 75223 Southeast Dallas - \$41,798
- 75227 Southeast Dallas - \$39,505
- 75401 Greenville - \$37,708
- 75217 Southeast Dallas - \$36,886
- 75241 Southeast Dallas - \$36,316
- 75203 Southeast Dallas - \$35,177
- 75215 Southeast Dallas - \$31,213
- 75216 Southeast Dallas - \$26,240
- 75210 Southeast Dallas - \$21,940

2018 Median Household Income by ZIP Code

Source: IBM Watson Health / Claritas, 2018

A large portion of the population (45%) had insurance through employer sponsored health coverage, followed by 19% without health insurance. The remainder of the population was divided between Medicaid (15%), Medicare (12%), and private market (the purchasers of coverage directly or through the health insurance marketplace) (9%).

2018 Estimated Distribution of Covered Lives by Insurance Category

Source: IBM Watson Health / Claritas, 2018

The community includes 31 Health Professional Shortage Areas and 21 Medically Underserved Areas as designated by the U.S. Department of Health and Human Services Health Resources Services Administration.¹ **Appendix C** includes the details on each of these designations.

Health Professional Shortage Areas and Medically Underserved Areas and Populations

NTX Lake Pointe/Rockwall Health Community	Health Professional Shortage Areas (HPSA)			Grand Total	Medically Underserved Area/Population (MUA/P)
	Dental Health	Mental Health	Primary Care		MUA/P
Dallas	10	9	12	31	19
Kaufman	0	0	0	0	2
Total	10	9	12	31	21

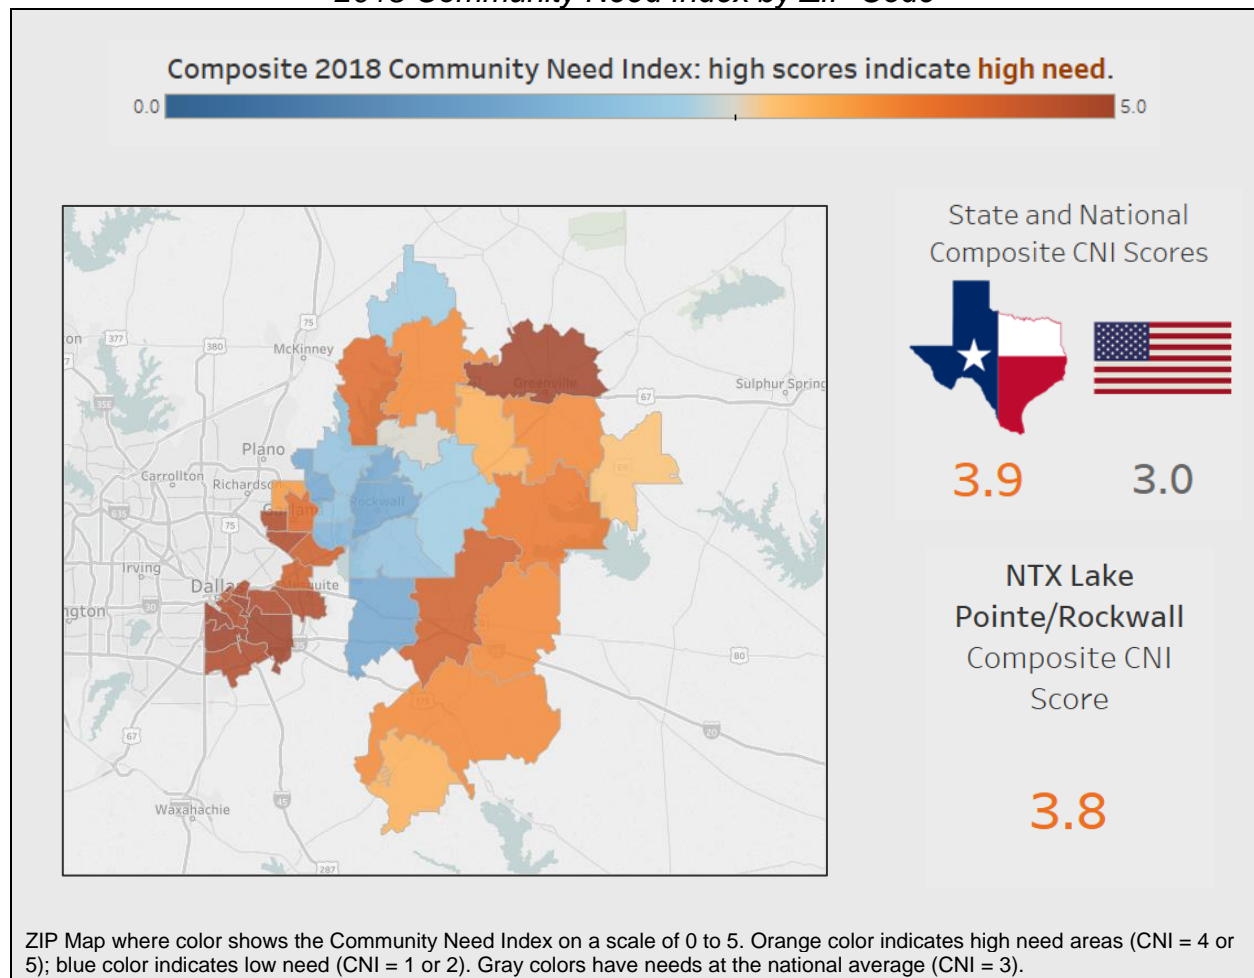

Source: U.S. Department of Health and Human Services, Health Resources and Services Administration, 2018

¹ U.S. Department of Health and Human Services, Health Resources and Services Administration, 2018

The Watson Health Community Need Index (CNI) is a statistical approach to identifying areas within a community where health disparities may exist. The CNI accounts for vital socio-economic factors (income, cultural, education, insurance and housing) about a community to generate a CNI score for every populated ZIP code in the United States. The CNI strongly links to differences in community healthcare needs and is an indicator of a community's demand for various healthcare services. The CNI score by ZIP code identifies specific areas within a community where healthcare needs may be greater.

Overall, the CNI score for the community served was 3.8, this is higher than the CNI national average of 3.0, potentially indicating greater health care needs in this community. There were portions of the community (Southeast Dallas, Garland, West Mesquite, and Greenville) where CNI score was greater than 4.5, pointing to potentially more significant health needs among the population residing in those ZIP codes.

2018 Community Need Index by ZIP Code

CNI High Need ZIP Codes

City	Community	County	ZIP Code	2018 CNI Score
Dallas	Southeast Dallas	Dallas	75203	5.0
Dallas	Southeast Dallas	Dallas	75210	5.0
Dallas	Southeast Dallas	Dallas	75216	5.0
Dallas	Southeast Dallas	Dallas	75217	5.0
Dallas	Southeast Dallas	Dallas	75246	5.0
Greenville	Greenville	Hunt	75401	5.0
Dallas	Southeast Dallas	Dallas	75215	4.8

Public Health Indicators

The collection of public health indicators helped assess community health needs. Evaluation for the community served used 102 indicators. For each health indicator, a comparison between the most recently available community data and benchmarks for the same/similar indicator was made. The basis of benchmarks was available data for the U.S. and the state of Texas.

Where the community indicators showed greater need when compared to the state of Texas comparative benchmark, the difference between the community values and the state benchmark was calculated (need differential). Those indicators with need differentials in the 50th percentile of greater severity pinpointed community health needs from a quantitative perspective. These indicators are located in **Appendix D**.

Watson Health Community Data

Watson Health supplemented the publicly available data with estimates of localized disease prevalence of heart disease and cancer and emergency department visit estimates. This information is located in **Appendix E**.

Focus Groups & Interviews

BSWH worked jointly with Parkland Health & Hospital System, Texas Health Resources, and Methodist Health hospital facilities in collecting and sharing qualitative data (community input) on the health needs of this community.

In the focus group sessions and interviews, participants identified and discussed the factors that contribute to the current health status of the community, and then identified the greatest barriers and strengths that contribute to the overall health of the community. For this health community there was one (1) focus group with 11 participants and 3 interviews conducted July through September 2018.

This health community was a diverse area, a melting pot of ethnicities and neighborhoods, each with different assets and health care needs. Companies were moving into the northern areas like Frisco and Plano, but the downtown area south of I40 lacked resources and was characterized by concentrated poverty and segregation. The area included urban areas with high poverty levels and growing homelessness; there were many non-profits and service organizations, but services were often uncoordinated and underutilized. The potential for infrastructure investment and coordination was high in this transitioning community.

Public transportation was extremely limited and compounded challenges to residents without a car. The focus group described a local culture of generational habits and limited knowledge about healthy eating habits. The food pantries were working to alleviate hunger and working to provide healthier and fresh food options, but language and culture were barriers to developing trust and increased access. This health community also had a shortage of providers and services, including primary care and dental, especially for low income and uninsured residents.

Focus groups shared that the diversity in the community also presented barriers to good health. Cultural and historical habits in the immigrant populations and lack of cultural sensitivity in providers contributed to a culture of distrust of outsiders. Combined with very limited public transportation, food deserts, and lack of insurance, many residents had no access to preventive services or primary care and used the ED for medical services.

One of the primary barriers to good health in this community was the lack of living wage jobs to pay for insurance, health services, and healthy food. Lack of insurance was often mentioned by the focus group as a big issue in the area. Many residents worked but didn't have health insurance, part of the "working poor" population. Participants identified gaps in service in all clinical areas; primary, maternal, vision, dental, specialty, and behavioral health care were the most acute. The needs for mental health services were frequently mentioned as a high need area; there was limited coordination of available services, the topic was highly stigmatized, very few services were available, and it affected all age groups.

Community Health Needs Identified

A Health Needs Matrix identified the health needs that resulted from the community health needs assessment (see Methodology for Defining Community Need section). The matrix shows the convergence of needs identified in the qualitative data (interview and focus group feedback) and quantitative data (health indicators) and identifies the top health needs for this community.

Top Community Health Needs Identified

Lake Pointe/Rockwall Health Community		
Top Needs Identified	Category of Need	Public Health Indicator
Children Eligible for Free Lunch Enrolled in Public Schools	SDH - Income	2015-2016 Percentage of Children Enrolled in Public Schools that are Eligible for Free or Reduced Price Lunch
Children in Single-Parent Households	SDH	2012-2016 Percentage of Children that Live in a Household Headed by Single Parent
Food Insecure	Environment - Food	2015 Percentage of Population Who Lack Adequate Access to Food During the Past Year
No vehicle available	Access To Care	2017 Households with no vehicle available (percent of households)
Percentage of Population under age 65 without Health Insurance	Access To Care	2015 Percentage of Population Under Age 65 Without Health Insurance
Ratio of Population to One Dentist	Access To Care	2016 Ratio of Population to Dentists
Ratio of Population to One Non-Physician Primary Care Provider	Access To Care	2017 Ratio of Population to Primary Care Providers Other than Physicians
Ratio of Population to One Primary Care Physician	Access To Care	2015 Number of Individuals Served by One Physician in a County, if the Population was Equally Distributed Across Physicians
Renter-occupied housing	Environment - Housing	2017 Renter-occupied housing (percent of households)
Severe Housing Problems	Environment - Housing	2010-2014 % of Households with at Least 1 of 4 Housing Problems: Overcrowding, High Housing Costs, or No Kitchen or Plumbing Facilities

Note: Listed alphabetically, not in order of significance

Source: IBM Watson Health, 2018

Prioritized Significant Health Needs

Using the prioritization approach outlined in the overview section of this report, the following needs from the proceeding list were determined to be significant and then prioritized.

The resulting prioritized health needs for this community were:

Priority	Need	Category of Need
1	Ratio of Population to One Dentist	Access to Care
2	Ratio of Population to One Primary Care Physician	Access to Care
3	Ratio of Population to One Non-Physician Primary Care Provider	Access to Care
4	Percentage of Population Under Age 65 Without Health Insurance	Access to Care
5	No Vehicle Available	Access to Care
6	Severe Housing Problems	Environment - Housing

Description of Health Needs

A CHNA for the Lake Pointe/Rockwell Health Community identified several significant community health needs that can be categorized as issues related to access to care as well as housing. Regionalized health needs affect all age levels to some degree; however, it is often the most vulnerable populations that are negatively affected. Community health gaps help to define the resources and access to care within the county or region. Health and social concerns were validated through key informant interviews, focus groups and county data. Access to care; specifically, insurance coverage, transportation and provider availability as well as severe housing problems were identified as significant areas of concern and noted in the data results for Dallas, Rockwall and Kaufman counties.

Population under age 65 without Health Insurance

Health Insurance coverage for adults not covered by Medicare has been a volatile topic for the last ten years. Health insurance coverage continues to be a major topic in recent elections and among voters. The passage of the Affordable Care Act (ACA) created options that increased the number of insured citizens in the under 65 categories. However, recent repeals of sections of the ACA may change coverage for millions in this age group. Lack of health insurance is a significant barrier in accessing health care and overall financial security. A key finding from a recent Kaiser Foundation paper included; "Going without coverage can have serious health consequences for the uninsured because they receive less preventative care, and delayed care often results in serious

illness or other health problems. Being uninsured can also have serious financial consequences, with many unable to pay their medical bills, resulting in medical debt."²

The Dallas County proportion of those under age 65 without health insurance was 22.8% or nearly 18% higher than the rate for the state of Texas overall. According to the 2018 County Health Rankings, the rate of uninsured population under age 65 across Texas was 19.2%, as compared to an overall U.S. rate of 11% and top performing U.S. counties rate of 6%.³ The Dallas County rate indicates need for a portion of the greater Lake Pointe/Rockwall Health Community.

No Vehicle Available

One issue that impacts access to care is transportation. While there are many means of transportation available to residents of a community, there is limited data on the availability and effectiveness of the various modes of transportation. One way to understand the impact of transportation on a population is to understand a household's access to a vehicle. Within the Dallas County portion of the Lake Pointe/Rockwall Health Community 6.6% of the households did not have access to a vehicle, this was 24% higher than the value for the state.⁴ While there are other options for transportation available to those without access to a vehicle, the data findings from community input sessions validated the impact lack of adequate transportation has had on access to health care services for community residents.

Primary Care Physician Providers

Primary care includes family medicine, internal medicine, nursing, nurse practitioners, pharmacy, pediatrics, general obstetrics/gynecology, gerontology, behavioral health, community health, and the other people and professions who fulfill the general medical needs of patient populations.

Primary care professionals serve on the front lines of healthcare. For many individuals, they are the first point of contact with the healthcare system. They are often the first to recognize signs of depression, early signs of cancer or chronic disease, and other health concerns. Primary care providers ensure patients receive the right care, in the right setting, by the most appropriate provider, and in a manner consistent with the patient's desires and values. Primary care is also important because it lowers costs. Access to primary care helps to keep people out of emergency rooms, where care costs are much higher than other outpatient care. Annual check-ups can catch and treat problems earlier and is less costly than treating severe or advanced illness.⁵

The community input participants expressed perceived lack of health care providers including primary care physicians and non-physicians as well and dentists within the Lake Pointe/Rockwall Health Community. The community has rural components that can

⁴ U.S. Census Bureau, American Community Survey 1-Year Estimates, 2017

⁵ **Primary Care Progress**, The Case for Primary Care, 2019

present additional challenges to access to care. Transportation to disparate care sites across the counties may be difficult, if not impossible.

While Dallas and Rockwall counties had primary care physician access that was outperforming the Texas average of one primary care physician to every 1,670 residents, Kaufman County's ratio was one provider to every 3,277 residents. The Kaufman County value was 96% higher than the state making access to primary care physician providers one of the top ranked needs for the community.

Non-Physician Primary Care Providers

There is a nationwide scarcity of physicians, particularly in small towns and cities. This shortage accentuates in rural areas across the country. Only about 11% of the nation's physicians work in rural areas, despite nearly 20% of Americans living there.⁶ Demographic shifts, such as growth in the elderly or near elderly populations increase the need for primary care access. Estimates of the scope of the provider shortage in rural America vary, however it is generally agreed upon that thousands of additional Primary Care Providers are needed to meet the current demand in rural America and tens of thousands of additional caregivers will be needed to meet the growing rural population. Recruiting physicians to rural areas is particularly challenging and it could take years to secure a vacant position.

Primary care physician extenders (e.g. nurse practitioners, physician assistants, and clinical nurse specialists) could help close the gap in access to primary care services when they are located in a community. Non-physician providers or physician extenders are typically licensed professionals such as Physician Assistants or Nurse Practitioners who treat and see patients. Dependent upon state regulations, extenders may practice independently, or in physician run practices. Physician extenders expand the scope of primary care providers within a geographic area and help to bridge the gap to both access to care and management of healthcare costs.

Non-physician primary care provider access in Kaufman County of one provider to every 2,752 residents was 84% higher than the Texas state threshold of one provider to 1,497 residents.⁷ The defined need for both primary care physicians and non-physician primary care providers exists in Kaufman county.

Access to Dentists

Economic disparity, whether through poor diet, food deserts, lack of insurance or funding, may impact dental hygiene. Lack of appropriate dental hygiene and bad teeth reinforces economic disadvantage. People with poor dental hygiene find it difficult find employment or impossible to get past the interview stages. Entry-level jobs require service attitude and nice smiles, and immediate and often unfavorable assumptions are made when encountering persons with poor dentition. Oral health could contribute to various diseases

⁶ J. Cromartie, Population & Migration (Washington, D.C.,: **U.S. Department of Agriculture, Economic Research Service, May 26, 2012**)

⁷ CMS, National Provider Identification Registry (NPPES), County Health Rankings & Roadmaps, 2018

and conditions such as endocarditis, cardiovascular disease, premature birth, and low birth weight.⁸

According to the County Health Rankings and Roadmaps 2018, the counties within the Lake Pointe/Rockwall Healthcare Community faced challenges regarding the supply of dentists. Kaufman County ratios of residents to dentists was 2,466 to one as compared to the overall Texas ratio of 1,790 to one, and top U.S. performers of 1,280 to one.⁹ Kaufman County dentist to population ratio was nearly two times higher than the overall Texas ratio. Social and economic constraints, such as insurance, transportation, etc. compounds the access to dental care issue in the community.

Severe Housing Problems

There is strong evidence characterizing housing's relationship to health as housing stability, quality, safety, and affordability all affect health outcomes. The impact of housing on health is now being widely considered by policy makers and healthcare providers. Housing is one of the best-researched social determinants of health, and selected housing interventions for low-income people have been found to improve health outcomes and decrease health care costs.¹⁰

The community input sessions for this community, and throughout the region BWHS serves, expressed that lack of affordable housing was becoming a prevalent concern in their communities. Texas communities are growing at double digit rates that highlight the need for stable and affordable housing. Also, the growing elderly population is transitioning from their life long homes to smaller, affordable, and more manageable housing. The challenge in managing the need for housing in growing communities is relevant across both Texas, and the nation.

Within the Lake Pointe/Rockwall Health Community, 22% of Dallas County households had at least one of four severe housing problems: overcrowding, high housing costs, or lack of kitchen or plumbing facilities. The rate for Dallas County households was 21% higher than the overall Texas value, making safe and affordable housing an issue within this community.¹¹

Summary

BSWH conducted its Community Health Needs Assessments beginning June 2018 to identify and begin addressing the health needs of the communities they serve. Using both qualitative community feedback as well as publicly available and proprietary health indicators, BSWH was able to identify and prioritize community health needs for their healthcare system. With the goal of improving the health of the community, implementation plans with specific tactics and time frames will be developed for the health needs BSWH chooses to address for the community served.

Appendix D: Public Health Indicators Showing Greater Need When Compared to State Benchmark

Lake Pointe/Rockwall Health Community		
Public Health Indicator	Category	Indicator Definition
HIV Prevalence	Conditions/Diseases	2015 Number of Persons Aged 13 Years and Older Living with a Diagnosis of Human Immunodeficiency Virus (HIV) Infection per 100,000 Population
Ratio of Population to One Primary Care Physician	Access To Care	2015 Ratio of Population to Primary Care Providers
Ratio of Population to One Non-Physician Primary Care Provider	Access To Care	2017 Ratio of Population to Primary Care Providers Other than Physicians
Perforated Appendix Admission: Adult (Risk-Adjusted-Rate for Appendicitis)	Preventable Hospitalizations	2016 Number Observed / Adult Population Age 18 and older
Chronic Lower Respiratory Disease (CLRD) Mortality Rate	Injury & Death	2013 Chronic Lower Respiratory Disease (CLRD) Age Adjusted Death Rate (Age-adjusted using the 2000 U.S. Standard Population)
Long Commute Alone	Environment	2012-2016 Among Workers Who Commute in Their Car Alone, the Percentage that Commute More than 30 Minutes
High School Dropout	Population	2016 A four-year longitudinal dropout rate is the percentage of students from the same class who drop out before completing their high school education.
Accidental poisoning deaths where opioids were involved	Mental Health	Annual Estimates of Accidental Poisoning Deaths where Opioids Were Involved Among Resident Population: April 1, 2010 to July 1, 2017.
Heart Disease Mortality Rate	Injury & Death	2013 Heart Disease Age Adjusted Death Rate (Per 100,000 - All Ages. Age-adjusted using the 2000 U.S. Standard Population)
Homicides	Population	2010-2016 Number of Deaths Due to Homicide, Defined as ICD-10 Codes X85-Y09, per 100,000 Population
Cancer Incidence - Lung	Conditions/Diseases	2011-2015 Age-Adjusted Lung & Bronchus Cancer Incidence Rate Cases per 100,000.
Motor Vehicle Crash Mortality Rate	Injury & Death	2010-2016 Number of Motor Vehicle Crash Deaths per 100,000 Population
Perforated Appendix Admission: Pediatric (Risk-Adjusted-Rate for Appendicitis)	Preventable Hospitalizations	2016 Number Observed / Pediatric Population Under Age 18
Ratio of Population to One Dentist	Access To Care	2016 Ratio of Population to Dentists
COPD in Medicare Population	Conditions/Diseases	2007-2015 Prevalence of chronic condition across all Medicare beneficiaries
Motor Vehicle Driving Deaths with Alcohol Involvement	Health Behaviors	2012-2016 Percentage of Motor Vehicle Crash Deaths that had Alcohol Involvement

Lake Pointe/Rockwall Health Community		
Public Health Indicator	Category	Indicator Definition
Renter-occupied housing	Environment	2017 Renter-occupied housing (percent of households)
Drug Poisoning Deaths Rate	Health Behaviors	2014-2016 Number of Drug Poisoning Deaths (Drug Overdose Deaths) per 100,000 Population
Death rate due to firearms	Injury & Death	2012-2016 number of deaths due to firearms, per 100,000 population.
Air Pollution - Particulate Matter daily density	Environment	2012 Average Daily Density of Fine Particulate Matter in Micrograms per Cubic Meter (PM2.5)
No vehicle available	Environment	2017 Households with no vehicle available (percent of households)
Children Eligible for Free Lunch Enrolled in Public Schools	Population	2015-2016 Percentage of Children Enrolled in Public Schools that are Eligible for Free or Reduced Price Lunch
Sexually Transmitted Infection Incidence	Health Behaviors	2015 Number of Newly Diagnosed Chlamydia Cases per 100,000 Population
Severe Housing Problems	Environment	2010-2014 Percentage of Households with at Least 1 of 4 Housing Problems: Overcrowding, High Housing Costs, or Lack of Kitchen or Plumbing Facilities
Cancer Incidence - Female Breast	Conditions/Diseases	2011-2015 Age-Adjusted Female Breast Cancer Incidence Rate Cases Per 100,000
Non-English speaking households	Population	2012 Percent- Language other than English
Premature Death (Potential Years Lost)	Injury & Death	2014-2016 Premature Death; Years of Potential Life Lost Before Age 75 per 100,000 Population (Age-Adjusted)
Percentage of Population under age 65 without Health Insurance	Access To Care	2015 Percentage of Population Under Age 65 Without Health Insurance
Children in Single-Parent Households	Population	2012-2016 Percentage of Children living in a Household Headed by Single Parent
Infant Mortality Rate	Injury & Death	2010-2016 Number of All Infant Deaths (Within 1 year), per 1,000 Live Births
Food Insecure	Environment	2015 Percentage of Population Who Lack Adequate Access to Food During the Past Year
Cancer Mortality Rate	Injury & Death	2013 Cancer (All) Age Adjusted Death Rate (Age-adjusted using the 2000 U.S. Standard Population)
Population with Adequate Access to Locations for Physical Activity	Environment	2010 & 2016 Percentage of Population with Adequate Access to Locations for Physical Activity

Lake Pointe/Rockwall Health Community		
Public Health Indicator	Category	Indicator Definition
Physical Inactivity	Health Behaviors	2014 Percentage of Adults Ages 20 and Over Reporting No Leisure-Time Physical Activity in the Past Month
Diabetes Short-term Complications Admission: Pediatric (Risk-Adjusted-Rate)	Preventable Hospitalizations	2016 Number Observed / Pediatric Population Under Age 18
Uninsured Children	Access To Care	2015 Percentage of Children Under Age 19 Without Health Insurance
Number of deaths due to injury	Injury & Death	2010-2016 Number of Motor Vehicle Crash Deaths per 100,000 Population
Cancer Incidence - All Causes	Conditions/Diseases	2011-2015 Age-Adjusted Cancer (All) Incidence Rate Cases Per 100,000.
Adult Smoking	Health Behaviors	2016 Percentage of the Adult Population Report Currently Smoke Every Day/Most Days and Smoked at Least 100 Cigarettes in Their Lifetime.
Hospital Stays for Ambulatory-Care Sensitive Conditions- Medicare	Access To Care	2015 Number of Hospital Stays for Ambulatory-Care Sensitive Conditions per 1,000 Medicare Enrollees
Teen Birth Rate per 1,000 Female Population, Ages 15-19	Health Behaviors	2010-2016 Number of Births to Females Ages 15-19 per 1,000 Females in a County.
Atrial Fibrillation in Medicare Population	Conditions/Diseases	2007-2015 Prevalence of chronic condition across all Medicare beneficiaries
Individuals Living Below Poverty Level	Population	2012-2016 American Community Survey 5-Year Estimates, Individuals below poverty level
Children in Poverty	Population	2016 Percentage of Children Under Age 18 in Poverty
Depression in Medicare Population	Mental Health	2007-2015 Prevalence of chronic condition across all Medicare beneficiaries
Child Mortality Rate	Injury & Death	2013-2016 Number of Deaths Among Children under Age 18 per 100,000
Osteoporosis in Medicare Population	Conditions/Diseases	2007-2015 Prevalence of chronic condition across all Medicare beneficiaries
Stroke Mortality Rate	Injury & Death	2013 Cerebrovascular Disease (Stroke) Age Adjusted Death Rate (Per 100,000 - All Ages. Age-adjusted using the 2000 U.S. Standard Population)
Cancer Incidence - Colon	Conditions/Diseases	2011-2015 Age-Adjusted Colon & Rectum Cancer Incidence Rate Cases per 100,000
Violent Crime Offenses	Population	2012-2014 Number of Reported Violent Crime Offenses per 100,000 Population

Lake Pointe/Rockwall Health Community		
Public Health Indicator	Category	Indicator Definition
Ratio of Population to one Mental Health Provider	Mental Health	2017 Ratio of Population to Mental Health Providers

Appendix E: Watson Health Community Data

Watson Health Heart Disease Estimates identified hypertension as the most prevalent heart disease diagnoses; there were over 286,000 estimated cases in the community overall. Southeast Dallas ZIP code 75217 and Garland ZIP code 75043 had the highest estimated cases of all heart disease types, driven in part by population size. However, despite a fewer number of cases, the ZIP codes in Terrell had some of the highest estimated prevalence rates for Arrhythmia (535 to 652 cases per 10,000 population), Hypertension (2,643 to 3,135 cases per 10,000 population), and Ischemic Heart Disease (490 to 637 cases per 10,000 population). While the ZIP codes in Quinlan-Caddo Mills had the highest estimated prevalence rates for Heart Failure (259 to 326 cases per 10,000 population).

2018 Estimated Heart Disease Cases

Source: IBM Watson Health, 2018

For this community, Watson Health’s 2018 Cancer Estimates revealed the cancers projected to have the greatest rate of growth in the next five years were pancreatic and bladder. The highest number of new cancer cases in 2018 were estimated to be breast and prostate cancers.

2018 Estimated New Cancer Cases

Source: IBM Watson Health, 2018

Estimated Cancer Cases and Projected 5 Year Change by Type

Cancer Type	2018 Estimated New Cases	2023 Estimated New Cases	5 Year Growth (%)
Bladder	224	269	19.9%
Brain	52	58	11.2%
Breast	1,106	1,269	14.7%
Colorectal	612	640	4.7%
Kidney	254	298	17.4%
Leukemia	171	199	16.2%
Lung	558	644	15.3%
Melanoma	207	243	17.4%
Non Hodgkins Lymphoma	231	269	16.8%
Oral Cavity	152	177	16.5%
Ovarian	77	86	12.9%
Pancreatic	190	228	20.5%
Prostate	936	1,012	8.2%
Stomach	102	118	15.2%
Thyroid	170	201	17.9%
Uterine Cervical	48	51	5.3%
Uterine Corpus	173	203	17.1%
All Other	731	856	17.1%
Grand Total	5,993	6,820	13.8%

Source: IBM Watson Health, 2018

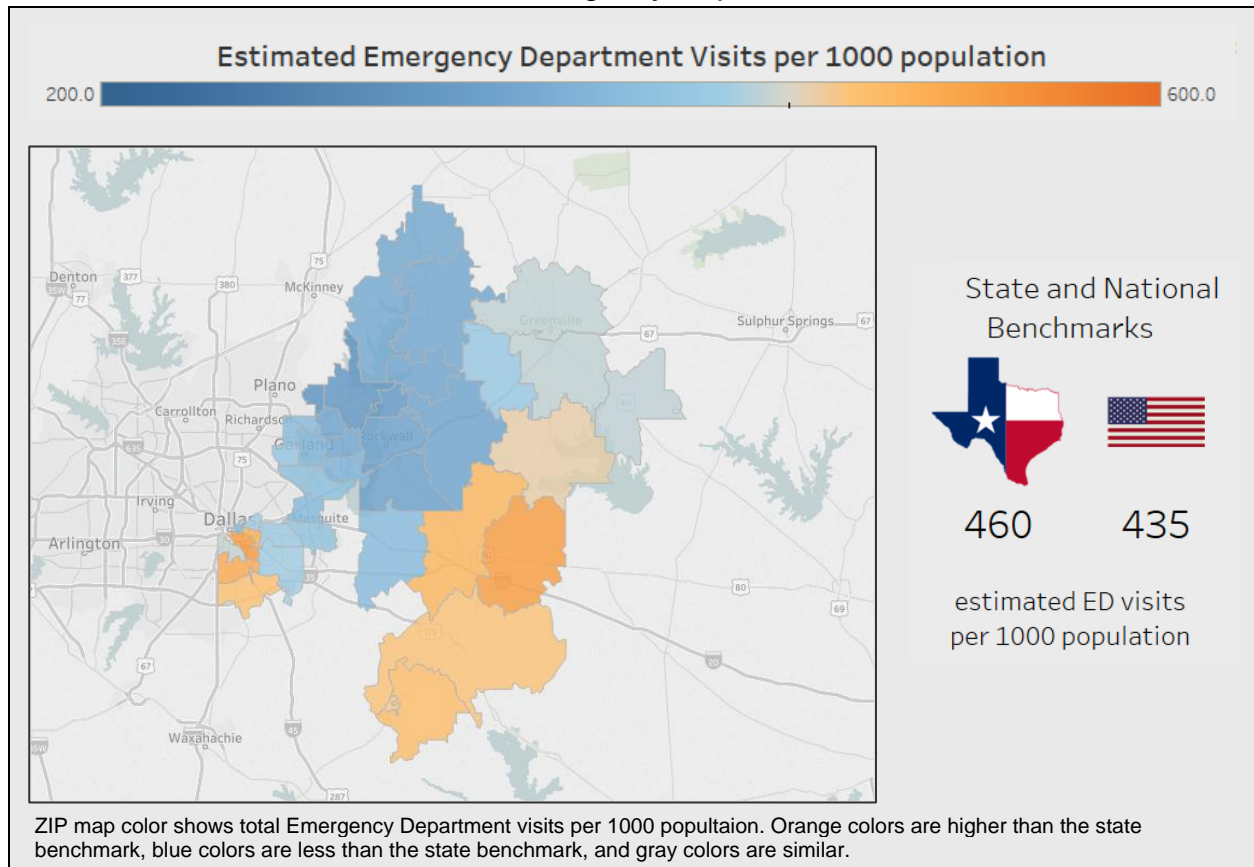

Based on population characteristics and regional utilization rates, Watson Health projected all emergency department (ED) visits in this community to increase by 8.2% over the next 5 years. Just under one-third of ED visits were generated by the residents of the Southeast Dallas ZIP codes. Several ZIP codes in Southeast Dallas and Terrell had the highest estimated ED use rates (498.5 to 534.0 ED visits per 1,000 residents) in this community compared to the Texas state benchmark of 460 visits and the U.S. benchmark 435 visits per 1,000.

These ED visits consisted of three main types: those resulting in an inpatient admission, emergent outpatient treated and released ED visits, and non-emergent outpatient ED visits that were lower acuity. Non-emergent ED visits present to the ED but can be treated in more appropriate and less intensive outpatient settings.

Non-emergent outpatient ED visits could be an indication of systematic issues within the community regarding access to primary care, managing chronic conditions, or other

access to care issues such as ability to pay. Watson Health estimated non-emergent ED visits to increase by an average of 4.1% over the next five years in this community.

Estimated 2018 Emergency Department Visit Rate

Note: These are not actual BSWH ED visit rates. These are statistical estimates of ED visits for the population.

Source: IBM Watson Health, 2018

Projected 5 Year Change in Emergency Department Visits by Type and ZIP Code

Three panels show the percent change in Emergency Department visits by 2013 at the ZIP level. The average for all ZIPs in the Health Community is labeled. ED visits are defined by the presence of specific CPT® codes in claims. Non-emergency visits to the ED do not necessarily require treatment in a hospital emergency department and can potentially be treated in a fast-track ED, an urgent care treatment center, or a clinical or a physician's private office. Emergent visits require immediate treatment in a hospital emergency department due to the severity of illness. ED visits that result in inpatient admissions do not receive a CPT® code, but typically can be assumed to have resulted from an emergent encounter.

Note: These are not actual BSWH ED visit rates. These are statistical estimates of ED visits for the population.

Appendix F: Evaluation of Prior Implementation Strategy Impact

This section provides a summary of the evaluation of the impact of any actions taken since the hospital facilities finished conducting their immediately preceding CHNA.

*Baylor Scott & White Medical Center –Lake Pointe
Baylor Scott & White Emergency Hospital – Rockwall*

Prior Significant Health Needs Addressed by Facilities

Prior Identified Need	Health care costs; affordability - rate of uninsured	Mental health - depression	Preventable admissions: adult uncolntrolled diabetes	Chronic disease - (obesity), physical activity and adults who smoke	Lack of dentists	Teen births, and drug poisoning deaths.
Facility						
Baylor Scott & White Medical Center - Lake Point	√	√	√	√		
Baylor Scott & White Emergency Hospital - Rockwall	√					

Total Resources Contributed to Addressing Needs: \$3,668,234

Identified Need Addressed: Health care costs/affordability - Rate uninsured

Program: Enrollment Services
Entity: Baylor Scott & White Medical Center – Lake Pointe
Description: The hospital provides assistance to enroll in public programs, such as SCHIP and Medicaid. These health care support services provided by the hospital to increase access and quality of care in health services to individuals, especially persons living in poverty and those in vulnerable situations. The hospital provides staff to assist in the qualification of the medically under-served for programs that enable their access to care, such as Medicaid, Medicare, SCHIP and other government programs or charity care programs for use in any hospital within or outside the hospital.
Impact: 18,400 persons served; Increased access to affordable care for uninsured populations
Committed Resources: Eligibility Consultants Inc., contract; \$237,459 net community benefit

Program: Financial Assistance
Entity Name: Baylor Scott & White Emergency Hospital – Rockwall
Description:

As an affiliated for-profit joint venture hospital, the hospital expanded its provision of financial assistance to eligible patients by providing free or discounted care as outlined in the BSWH financial assistance policy. The hospital has agreed to provide the same level of financial assistance as other BSWH nonprofit hospitals and to be consistent with certain state requirements applicable to nonprofit hospitals. Certain hospitals not meeting minimum thresholds are required to make a contribution/grant to other affiliated nonprofit hospital to help the hospital treat indigent patients.
Impact: 1,125 persons served
Committed Resources: \$170,094 net community benefit

Program: Medical Education - Nursing Students
Entity: Baylor Scott & White Medical Center – Lake Pointe
Description: The hospital is committed to assisting with the preparation of future nurses at entry and advanced levels of the profession to establish a workforce of qualified nurses thereby affecting the documented shortage of non-primary care nurses and health care providers. Through the System’s relationships with many North Texas schools of nursing, the hospital maintains strong affiliations with schools of nursing. Like physicians, nursing graduates trained at the hospital are not obligated to join the staff although many remain in the Community to provide top quality nursing services to many health care institutions. Community Partners and their outcomes: <ul style="list-style-type: none"> • Texas A&M College of Nursing – Commerce • Trinity Valley College School of Nursing • TWU • WGU School of Nursing
Impact: 41 nursed educated; increased quality and size of nursing work force in the North Texas area
Committed Resources: Nurse Educator; staff time; \$2,293,410 net community benefit

Program: Workforce Development
Entity: Baylor Scott & White Medical Center – Lake Pointe
Description: The hospitals are collaborating with Health Texas Provider Network to recruit physician into the communities that would provide more access for Medicaid patients.
